Print Statements and Comments

Hello World!

Print Statements in Java

In the main method:

System.out.print("Hello World");

System.out.println("Hello World");

What's the difference?

System.out.print("Hello World");

//prints statements on one continuous line

System.out.println("Hello World");

//adds a new line after printing the statement

Comments

Single Line Comments:

//comments here

Block Comments:

/* comment starts

   continues

   comment ends */

Add to your helloWorld project

Write code that prints out the following information. Use a separate print statement for each of the items:

```
Your name
Preferred pronouns
Age, DOB, Grade level

Favorite color:
Favorite animal:
Favorite movie:
2 fun facts about yourself:
```
